

MOKO SMART

Bluetooth AoA Starter Kit

The starter Kit is a standardized product lineup designed for evaluating the MOKO AoA Intelligent Locating System, specifically for sales demonstrations, customer experience, and project validation of high-precision indoor positioning systems.

By packaging complex AoA positioning technology into modular and scenario-based demo kits, this solution enables fast deployment, intuitive demonstrations, and realistic project evaluation, helping customers clearly understand AoA positioning capabilities and confidently assess its suitability for real-world applications.

Sub-meter level accuracy

High concurrency

High reliability and anti-interference capability

Real-time location monitoring

Ultra-low power consumption for tag

Kit Options

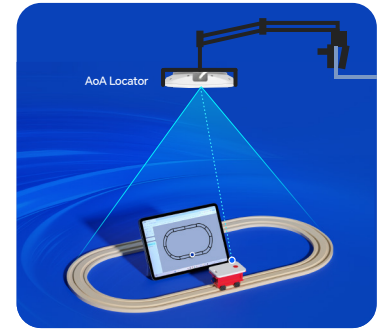

Experience Kit

Deploy a toy train with an AoA tags on the track, while the overhead locator tracks its position and visualizes the trajectory in real time through pre-installed software. Perfect for exhibitions and quick presentations.

 Concise and efficient presentation

 Rapid and flexible deployment

 Seamless plug and play

Interactive Kit

Utilize pre-mounted poles and two AoA locators to deploy an interactive demo area, enabling users to experience real-time accuracy and responsiveness firsthand. Suitable for demonstrations and customer experiences.

 Engaging interactive showcase

 Rapid and flexible deployment

 Seamless plug and play

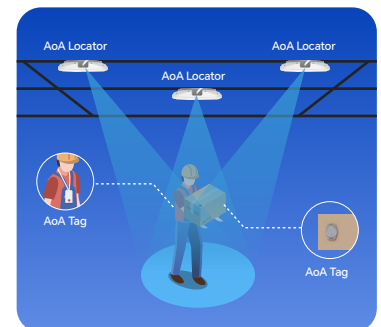

POC Kit

The kit sets up three locators and six tags to simulate a complete AoA positioning system. Appropriate for hands-on demonstrations, feasibility studies, and technical evaluations of Bluetooth AoA technology.

 Real-world POC implementation

 Fully functional system validation

 Complete process verification
